PROFESSIONAL SUMMARY

Backend Engineer with 4+ years of experience working on production-grade APIs, backend systems, and AI-driven workflows. Experienced in building and improving systems that handle real-world data, high request volumes, and failure scenarios. Worked across backend, AI integrations, and frontend interactions, with exposure to cloud deployments, messaging systems, and automation workflows. Strong focus on reliability, performance, and practical system design.

PROFESSIONAL EXPERIENCE

- TriColor Initiatives / Illumia Ventures**
Software Engineer - Backend & AI Systems

06/2024 – Present

 - Worked on Python-based backend services for AI-driven workflows in production environments
 - Developed and maintained REST APIs with focus on performance, validation, and secure data handling
 - Handled real-world challenges like unreliable AI responses by implementing validation, fallback handling, etc.
 - Worked with external services and integrations (AI APIs, notifications, and automation workflows)
 - Improved system reliability through structured logging, retry mechanisms, and failure-safe processing
- MOBtexting (BICS Group)**
Software Engineer

07/2022 – 05/2024

 - Worked on backend systems for messaging, campaign orchestration, and communication workflows
 - Developed REST APIs and backend flows for scheduling, automation, and message processing pipelines
 - Contributed to improving system reliability by handling failures, improving logging, and debugging production issues
 - Worked on ensuring messages and workflows are processed reliably without data loss
 - Collaborated with frontend teams and also worked on UI integrations using JavaScript/React for feature delivery
 - Improved maintainability through better code structure, validation, and test coverage
- Roots & Stalks Digital**
Software Engineering Intern

01/2022 – 03/2022

 - Assisted in building backend services and integrating APIs
 - Gained exposure to production workflows and real-world development practices

PROJECT HIGHLIGHTS

- KaamFind - Job Discovery Platform** 🔗
Startup Product | Backend System Design

 - Built backend for job marketplace supporting web and mobile clients using shared APIs
 - Designed REST APIs for job search, applications, and onboarding workflows with role-based access
 - Designed database schema and handled application lifecycle flows ensuring data consistency
 - Integrated notifications (email/OTP) and handled validations for secure user interactions
 - Focused on handling real-world cases like duplicate applications, invalid states, and request validation
- FitGPT – AI Fitness Platform**
Full Stack AI System

 - Built AI-powered fitness platform with personalized workout and diet planning features
 - Developed backend using FastAPI with JWT authentication and database integration
 - Implemented AI chat with streaming responses; validated structured workout/diet plan outputs from the LLM
 - Integrated LLM APIs with fallback handling to maintain system stability
 - Developed web (React) and mobile (React Native) clients consuming shared backend APIs

CORE SKILLS

Backend Python, REST APIs, Backend System Design, Laravel, PHP, Flask API	AI & Automation LLM APIs, Prompt Engineering, AI Workflow Automation	Frontend JavaScript, React.js, React Native
Databases MySQL, PostgreSQL	DevOps & Tools Git, Docker, CI/CD, Postman
